## Overview

What is an uninterruptible power supply system?

Uninterruptible power supply systems can reduce downtime (and its cost) in manufacturing by providing reliable backup power in an emergency. A UPS allows your systems to shut down slowly, in alignment with standard procedures, as opposed to the rapid shutoff of an outage, which could damage the equipment.

What is an uninterrupted power supply (UPS) system?

Abstract. In the modern world, when there is a power outage or a power failure, telecommunication systems, computer systems, and many other critical equipment, such as medical equipment, require uninterrupted power to support their operation. Uninterruptible power supply (UPS) systems are used for this purpose.

What is a Mitsubishi Electric uninterruptible power supply (UPS) system?

Mitsubishi Electric uninterruptible power supply (UPS) systems provide daily power conditioning as well as backup power in the event of an outage to reduce damage to manufacturing equipment and maintain uptime for your production line.

What happens if a utility main is not available?

When utility mains are not available, electricity can be supplied from a source such as a standard connected equipment UPS, which provides power supply. UPS is mostly used for critical loads and is kept between commercial utility mains. In the event of a power outage or other anomaly, UPS instantly switches to its own power from the grid.

How do UPS systems work?

Such UPS systems use energy storage technologies such as batteries or flywheels to provide power to loads in the absence of applied power. Typically,

static power electronics such as fast-switching high-current insulated gate bipolar transistors (IGBTs) are used to convert power.

Why do you need a Mitsubishi Electric ups?

A UPS can also support your daily operations with power conditioning that keeps your equipment safe and functioning at peak efficiency. Learn more about how Mitsubishi Electric UPS reduce the cost of downtime in manufacturing and smooth out your daily power supply in harsh environments.
