# **Solar tile installation in Spain**

## Overview

---

How to install solar tiles on a ventilated roof?

SOLAR tiles, both the Flat-5XL and Flat-10 formats, must always be installed on ventilated roofs, using a double batten or equivalent system. The integration of the tiles into the roof is achieved by finishing the roof with ceramic tiles and their corresponding special pieces.

What is a Spanish tile roof?

Spanish tile refers to the style of the tile, not the material. Spanish tile is usually made of either clay or concrete. Installing a solar PV system on a clay tile roof, generally, is far more expensive than installing on a concrete tile roof.

Which roof tile has a solar panel?

The SOLAR FLAT-5XL ceramic tile, which has a solar panel on the large ceramic base of the roof tile, preserves the dimensions of the original ceramic tile and is still completely flat. The choice of materials for a roof is crucial to guarantee its durability, watertightness, energy efficiency and to protect the home.

Who is solar in Spain?

The Solar in Spain team has been helping homeowners enjoy clean, reliable solar energy since 1999. With over 5,000 successful installations, we make switching to solar simple, stress-free, and tailored to your lifestyle. Why Choose Solar in Spain?

Does a Spanish tile roof look like clay?

In general, concrete Spanish tile roofs look more uniform than clay. However, sometimes roofers do use a fiberglass composite that looks like clay.

Unfortunately for customers with fiberglass composite roofs who want to go solar, these type of roofs, like a clay tile roof or fragile (thin) tile roof, would need a cop-out. Do a Google Maps search.

Why should you choose solar in Spain?

Imagine life in Spain the way it should be: sunny, simple, and stress-free. At Solar in Spain, we make that dream a reality by taking full responsibility for your energy needs. With over 5,000 successful installations since 1999, we are one of Spain's most trusted names in solar energy solutions.
