What are energy storage lithium battery packs?

Energy storage lithium battery packs are based on lithium iron phosphate batteries. They are a lithium battery system designed in series with modules, featuring a reliable BMS system and high-performance equalization technology to improve overall safety and service life.

What is a stacked energy storage system?

The fully modular design allows for easy addition or subtraction of module quantity, convenient maintenance and expansion, quick display of product status, and automated intelligent management without the need for manual operation. In stacked energy storage systems, they are generally divided into low-voltage stacking and high-voltage stacking.

What is the difference between high voltage and low voltage energy storage?

Additionally, high-voltage systems can charge and discharge more efficiently, tolerate higher energy density, and are suitable for storing large amounts of energy. Low-voltage systems are more suitable for small-scale energy storage systems, such as home energy storage systems, etc.

What is the difference between high voltage and low voltage stacking?

In low-voltage stacking schemes, lower voltage batteries are used, resulting in relatively lower safety requirements for the system. Different scalability: In high-voltage stacking schemes, the minimum unit is generally 3 or 4 modules connected in series; in low-voltage stacking schemes, the minimum unit is 1 module.
