## Overview

---

How big is the global supercapacitor market?

The global supercapacitor market, as reported by Statista, was valued at approximately USD 2.22 billion in 2021, and it is expected to grow at a compound annual growth rate (CAGR) of 20% through 2027. This remarkable growth is attributed to the ongoing innovations in activated carbon production and its application in supercapacitors.

What are supercapacitors based on activated carbon electrodes?

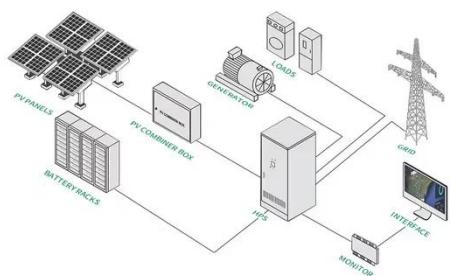

Supercapacitors (or ultracapacitors, or electrochemical capacitors) based on activated carbon electrodes are an energy storage device which has been the object of important research in the last decade [ 1, 2 ]. They provide higher energy density than dielectric capacitors, while demonstrating higher power density than batteries [ 3, 4 ].

What makes a supercapacitor energy efficient?

The energy-efficient functionality is enabled by a supercapacitor, an electronic device that is traditionally composed of carbonaceous material such as activated carbon and metal oxide such as ruthenium oxide as the major components in order to store and provide energy.
