How has energy storage changed in the UK?

RenewableUK's 'EnergyPulse' energy storage report showed that the total pipeline of battery projects has increased from 50.3GW a year ago to 84.8GW, an increase of 68.6 per cent, or 34.5GW. Operational battery storage capacity has grown to 3.5GW, while the capacity of projects under construction has reached 3.8GW.

Can energy storage improve the resilience of the UK's electricity grid?

Over £32 million government funding has been awarded to UK projects developing cutting-edge innovative energy storage technologies that can help increase the resilience of the UK's electricity grid while also maximising value for money.

How many battery storage projects are there?

The pipeline of battery storage projects has continued to grow steadily again, from 84.4GW in December 2023 to 95.5GW in May 2024. This edition of the EnergyPulse report on Energy Storage shows there is 8.7GW of batteries in operation and under construction and more than 30GW projects have now been consented.

What is a battery energy storage system?

As renewable capacity is added to the grid, the need to store and flexibly manage electricity grows with it. This is where the crucial role of battery

energy storage systems (BESS) come into play, storing and releasing energy for when it's needed most. We look at what's happening with the growth of BESS in the UK.

What is a solar-plus-battery energy storage system?

1. Sunnica Solar-plus-Battery Energy Storage System A lithium-ion battery in the UK, which is owned and developed by Sunnica, and will be commissioned in 2025.
