Uninterruptible power supply for Aarhus mine in Denmark

Overview

Does the port of Aarhus have a shore power plant?

The Port of Aarhus has an onshore power plant on its way to container ships, which will be the first of its kind in Denmark. And a new agreement stipulates that it must be supplied by Danish PowerCon. We are pleased that we can once again collaborate with PowerCon to establish a shore power facility.

Which European ports will offer shore power for container ships by 2030?

Ports in Aarhus, Gothenburg, Bremerhaven, and Stockholm will all offer shore power for container ships by 2030 as part of the “OPS Network” project. The project is supported by the EU fund “Connecting Europe Facilities” with a grant of 18.8 million euros.

Does Denmark have a power shortage?

According to Kriseninformation, despite Denmark's relative grid stability, the risk of power shortages is currently higher than usual, in part due to the war in Ukraine, but also the result of decommissioning several European power plants in favor of renewable alternatives.

What are uninterruptible power supplies (UPS)?

Uninterruptible power supplies (UPS) are not a new technology but over recent years their application to the mining industry has increased in terms of volume and rated power. UPS installations come in various shapes and sizes that are specific to each application and the associated electrical installation.

Where is Denmark's New shore power facility located?

The facility will be located at the container terminal in Aarhus, Denmark's largest. 2024 marked the first full year of operation for the shore power facility at the cruise terminal, with 68 percent of the cruise ships docking there using shore power. The facility for container ships, however, will be a little different.

Are ups suitable for electrical installations at mine sites?

risks may be created by arcing, fire, fumes or acids/chemicals associated with the batteries. Not all UPS installations are suitable for connection to electrical installations at mine sites. Specialist consultants should be involved in the design of the installation to ensure the application is fit for purpose.
