## Overview

---

Why should you install a UPS system in a substation?

With UPS installations in plants and substations, you can guard against downtime throughout your entire infrastructure. Avoid the irony of a power plant without power with uninterruptible power supplies to ensure the continuity of the utility's supply and minimize disruptions.

What is an uninterruptible power supply (UPS)?

The uninterruptible power supply (UPS) provides a dependable backup power to the protective relay (s) in the event the primary power source is lost. The UPS was specifically designed for use with the ABB Distribution Unit (DPU) and the ABB Integrated Microprocessor Protective Relay System (IMPRS) relays.

What auxiliary equipment does a substation use?

Each substation employs numerous auxiliary equipment including transformers, circuit breakers, switchgear, relays, and SCADA systems performing a range of tasks depending on the locale's specific needs. With UPS installations in plants and substations, you can guard against downtime throughout your entire infrastructure.

Why do energy companies use ups?

Energy and utility companies operating nuclear, natural gas, alternative, or electric power plants trust our UPS systems to protect their critical equipment and make sure they can support their customers downstream with power they need for smooth, everyday operations.

Why do you need a power plant ups?

Power plant UPS are also used to provide an extra layer of protection for security alarms and communications in utilities and their respective network of remote substations. Uninterruptible power supplies can offer protection to your equipment and essential service throughout your infrastructure.

Why should you install a power plant ups in an 811 call center?

Power plant UPS keep operations up while a UPS installed in an 811 call center can help keep lines open so utility lines aren't damaged by misinformed digging. Whatever point in your power distribution needs support, Mitsubishi Electric can help.
