

SolarGrid Energy Solutions

Uninterruptible power supply mp

Overview

What is an uninterruptible power supply (UPS)?

Kstar's MP S series uninterruptible power supplies (UPS) are high-reliability devices that feature input and output voltage isolation. This design ensures the protection of connected equipment from damage caused by fluctuations in electrical parameters within the network.

What is a Master MPS Uninterruptible Power Supply?

The Master MPS uninterruptible power supply is a proven performer in almost any mission-critical environment and can handle capacitive loads such as blade servers.

What is a Master MPS UPS?

The Master MPS series of UPS are designed for mission-critical environments such as data centres, telecoms networks, security systems, electro-medical devices, and industrial applications. They offer maximum power.

What are the components of a UPS system?

Components: Parts of a typical UPS system are an inverter, which transforms stored DC power back into AC power after a power loss, a battery, which stores electrical energy, and a rectifier, which converts incoming AC power to DC power for charging the internal battery.

How many UPS units can be connected in parallel?

2.3 UPS AND SYSTEM ARCHITECTURES DELPHYS MP elite + UPS units (rectifier, battery, inverter and bypass) can be connected in parallel (up to 6 units) with distributed or central bypass. This solution, which is ideally suited for N+1 redundancy, offers flexible power upgrading and enables stand-alone UPS units to be expanded.

Can a single UPS unit have a maintenance bypass?

Each single UPS unit has a built-in maintenance bypass (single unit or 1+1 redundant configuration). It is possible to add an external maintenance bypass, common to all of the UPS units, for maintenance access. A central bypass configuration has a common maintenance bypass for the complete system.
