## Overview

---

Are user-side small energy storage devices effective?

Among them, user-side small energy storage devices have the advantages of small size, flexible use and convenient application, but present decentralized characteristics in space. Therefore, the optimal allocation of small energy storage resources and the reduction of operating costs are urgent problems to be solved.

What is the difference between user-side small energy storage and cloud energy storage?

The specific differences are as follows: User-side small energy storage participates in the optimization and scheduling of the cloud energy storage service platform, which can aggregate dispersed energy storage devices.

What are the economic benefits of user-side energy storage in cloud energy storage?

Economic benefits of user-side energy storage in cloud energy storage mode: the economic operation of user-side energy storage in cloud energy storage mode can reduce operational costs, improve energy storage efficiency, and achieve a win-win situation for sustainable energy development and user economic benefits.

What is operational mechanism of user-side energy storage in cloud energy storage mode?

Operational mechanism of user-side energy storage in cloud energy storage mode: the operational mechanism of user-side energy storage in cloud energy storage mode determines how to optimize the management, storage, and release of energy storage resources to reduce user costs, enhance sustainability, and maintain grid stability.

What are the economic benefits of small energy storage devices?

Small energy storage devices purchase electricity during the low load period of the distribution network, ensuring the economic benefits of the energy storage party. Comparison of electricity sold by small energy storage devices 1-5 before and after participating in the service. The income from the energy storage device determined by Eq. (21).

Should small-scale energy storage devices cooperate with cloud energy storage service providers?

Furthermore, the study evaluates the benefits of cooperation between small-scale energy storage devices on the user side and cloud energy storage service providers before and after. The ratio of leased capacity to actual storage capacity of the storage device at full power is 0.9.
