# Wattage Outdoor Power

## Overview

---

What wattage should outdoor lights be?

The recommended wattage for outdoor lights is 40 watts and lower. Up to 40 watts is ideal for lighting pathways, garden beds, and other landscape areas. Lights with a wattage between 40 and 80 watts are great for brightening areas like driveways, smaller yards, and the inside of your home.

How many Watts Does a landscape light use?

An individual light uses 5W to 10W and a backyard system will use 6 to 10 of these lights. The exact number depends on the size of your system and model of your landscape lights. For example, a set of six 5W lights uses 30W while a set of ten bright 10W lights uses 100W. The reason for this difference is quite simple.

How much power does a landscape lighting system need?

Your power source, like an inverter, should have a wattage capacity of at least 20% more than your landscape lighting. This ensures it will be able to deliver enough power as they are never 100% efficient. A 200W power source should do the job for most LED domestic systems.

What wattage light should I use for my lawn?

If you're looking to flood your lawn with light, select lighting to accommodate bulbs with wattages of 80 or higher. Bulbs that are 100 watts and higher are appropriate for pedestrian areas, institutions, parking lots or roadways. Roadway lighting may have a wattage of up to 400 watts.

How do I find the maximum watt rating for landscape lighting?

If you know the amperage and voltage of your landscape lighting you can use this to find the maximum watt rating. Simply use the formula  $\text{Amps} \times \text{Volts} = \text{Watts}$ . Or you can head over to the 'Watt Calculator' to work this out. Let's take a look at specific examples of how many watts landscape lighting draws.

What is a 40 watt light?

Notably, these lights are mainly used for lighting and not brightening the installation area. Lights within the 40 to 80 wattage category area are used in brightening their installation area. They are ideal for outdoor sites such as small yards, driveways, and your home's interior.
